I. Cardiovascular

MYOCARDIAL INFARCTION

[Article – Advocate Health 2025] [Understanding the Burden of Myocardial Infarction and Patient Preferences for Treatment: A Real-World Study Assessing Patients’ Perspectives via an Online Survey](#)

Presented: ADVOCATE HEALTH (2025)

Purpose: Myocardial infarction (MI) remains to be associated with a high risk of recurrent cardiovascular events and disease burden. This study assessed patient perspectives on the burden of disease and treatment in the first year post-MI.

Methods: Data were collected via a self-administered online questionnaire posted on the Carenity patient platform in the United States (10/30/2022–12/30/2022). Only patients who had an MI in the prior year were eligible for inclusion.

[POSTER – ISPOR EUROPE 2024] [Understanding the Patient Perspectives of Post-Discharge Care and Impact of Treatment in the First Year Post-AMI](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2024)

Patients have a high risk of recurrent cardiovascular events post-acute myocardial infarction (AMI) and require long-term guideline-directed secondary prevention medical therapy. Understanding treatment experiences post-AMI from patients’ perspective is important for optimizing care.

Authors: M. Cecilia Bahit, Serge Korjian, Gerald Chi, Yazan Daaboul, Ginger Jiang, Deepak L. Bhatt, Roxana Mehran, Paul Nara, Alka Shaunik, C. Michael Gibson

[POSTER – ISPOR EUROPE 2024] [Digital Engagement to Capture Insights Into Patient Perspectives on Care and Quality-of-Life: Utilizing an Online Survey to Understand the Burden on Patients Post-Acute Myocardial Infarction](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2024)

The importance of tailored care to address patient preferences has been increasingly recognized in recent years. Here, we evaluate an online survey designed to gather patient perspectives post-acute myocardial infarction (AMI) and identify their treatment preferences/goals.

[POSTER – ISPOR Europe 2018] [What are the most valued patient outcomes regarding medical care for French patients with heart failure? Results from an online patient community](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2018)

More than 1 million people were suffering from heart failure (HF) in France in 2017. The ageing population and financial constraints have put a great strain on the French healthcare system. Value-based healthcare (VBHC) is emerging as a possible solution to build a more efficient healthcare system. The objectives are to define and rank the most valued outcomes in medical care for patients affected by heart failure and to better understand patients' expectations for healthcare organizations and patient support services.

[Article – Taylor & Francis 2025] [Patient perceptions, motivations and barriers to treatment adherence in hypertension: results of a questionnaire-based survey in five European countries](#)

Presented: Taylor & Francis (2025)

In patients with asymptomatic chronic diseases who need to take lifelong medications, like hypertension, understanding their perspectives, beliefs, motivations and barriers to pharmacological treatment is of utmost importance as it may influence their adherence and help health professionals to find the right paths to guide that engagement. Indeed, poor adherence to prescribed medications and lifestyle recommendations is recognized as a major contributor to poor BP control worldwide. Our survey conducted in five large European countries in more than 2000 mainly older hypertensive patients prescribed less than 2 antihypertensive treatments on average shows the following:

- more than 80% of participants acknowledge the need to be treated lifelong and that medications are necessary to control their BP and maintain their good health;
- antihypertensive therapy represents a low burden in their daily life except for participants with a high-risk of non-adherence;
- self-reported adherence is high and unintentionally missing doses is the most common cause of non-adherence;
- patients seldom report episodes of non-adherence to their physicians;
- the risk of non-adherence is highest in patients with a high emotional and QoL risk score;
- the majority of patients (58%) report that they have no need for additional motivation to adhere to their prescription, but this was not the case of patients with a high risk of non-adherence or a high emotional risk score who had a high demand for more support and information on hypertension and its treatment.

[POSTER – ESH 2019] [Treatment acceptability and patients' expectations regarding arterial hypertension: results from an online European patient community pilot survey](#)

Presented: European Society of Hypertension (ESH) (2019)

Arterial hypertension is highly prevalent in developed countries and it is a major cardiovascular risk factor and a major contributor to mortality. Patients are often required to take several antihypertensive medications and about half of patients have uncontrolled blood pressure. The aim of the study is to better understand patient's perception of arterial hypertension, difficulties regarding their treatment and expectations to improve their adherence.

II. Dermatology

PSORIASIS

[ARTICLE – European Journal of Dermatology 2024] [The patient's perspective on the burden of psoriasis: findings based on the ROCQ, an online survey](#)

Published in European Journal of Dermatology (2024)

Psoriasis is a common chronic skin disease, with well-characterised impact on quality-of life, however, no information is available on the lifetime impact of psoriasis on patients' lives. This descriptive cross-sectional web-based survey of patients with psoriasis, recruited from an online patient community, was conducted in France in 2021. Established questionnaires (Major Life-Changing Decision Profile-MLCDP, Dermatology Life Quality Index-DLQI, Hospital Anxiety and Depression Scale [HADS]), CAGE and BRIEF-COPE) were administered together with specially created questions.

[ARTICLE – Journal of Dermatology 2020] [Perception of therapeutic inertia by patients with psoriasis in France](#)

Published in Journal of Dermatology (2020)

Therapeutic inertia (TI), the failure of health-care providers to initiate or intensify therapy when indicated, is caused by the attitude of health-care providers, unlike the concept of poor therapeutic compliance, which is generally attributed to the attitude of the patient who does not follow the proposed prescriptions.

[POSTER – EADV 2020] [Real-world study of the impact of the Covid-19 pandemic on patients with psoriasis](#)

Presented: 29th European Academy of Dermatology and Venereology (EADV) Congress (2020)

This study was made during the outbreak of coronavirus disease 2019 (COVID19) pandemic known as COVID-19. The virus has spread over 200 countries, affecting more than 35 million people and causing over than 1 000 000 deaths. Consequences have arisen for the clinical outcomes of patients with psoriasis as well as obstacles to regular access to healthcare and taking long-term medications.

Objective: Evaluation of the impact of the COVID-19 outbreak on patients with psoriasis using an online patient community.

Collaborator: Scientific committee

Authors: B. Halioua, J. Zetlaoui, R. Kanengieser, E. Pain, T. Lévy-Heidmann, L. Radoszycki

[POSTER – EADV 2019] [Study on the therapeutic adherence by patients with psoriasis in France: a study of 181 patients](#)

Presented: European Academy of Dermatology and Venereology (EADV) (2019)

Medication adherence is an important challenge when treating psoriasis that requires a long-term management to induce and maintain clinical remission. Low adherence to therapies in psoriasis decreases treatment outcomes and increases the total healthcare costs. A majority of treatment failures may also be attributed to poor adherence to medications.

Objectives: The aim of this study was to determine the prevalence of adherence and to identify specific factors, which can impact medication adherence in patients with psoriasis.

Collaborator: Scientific committee

Authors: Halioua B, Zetlaoui J, Pain E, Radoszycki L, Testa D

[POSTER – EADV 2019] [Patients' perceptions and experiences of biologic therapies for psoriasis in France](#)

Presented: European Academy of Dermatology and Venereology (EADV) (2019)

Some patients with moderate to severe psoriasis do not respond or cannot be treated with conventional systemic drugs. The development of biological agents targeting tumor necrosis factor alpha (TNF α), interleukin (IL)-17, IL-12 and IL-23 revolutionized the management of those patients. Yet, treatment dissatisfaction and non-adherence are common among patients with psoriasis. There is scarce data in France about patients' perceptions and experiences with biologic therapies for psoriasis.

Objectives: The objective of this study was to describe patients' perceptions and experiences with psoriasis in France, addressing communication with physicians, satisfaction with biologics and concerns regarding treatment options.

Collaborator: Scientific committee

Authors: Halioua B, Zetlaoui J, Pain E, Radoszycki L, Testa D

[POSTER – JDP 2019] [Etude de l'observance thérapeutique chez 181 patients atteints de psoriasis en France](#)

Présenté aux Journées Dermatologiques de Paris (JDP) (2019)

L'observance thérapeutique (OT) est définie par le degré de concordance entre le comportement du patient et les recommandations de son médecin. L'OT au cours du psoriasis varie de 21 à 66%. De multiples facteurs liés à la maladie, au traitement, à la relation médecin/patient, au médecin et au patient expliquent cette mauvaise observance. Une meilleure connaissance des éléments liés à la typologie des patients non-observants est susceptible d'améliorer l'observance, avec pour conséquence une meilleure efficacité thérapeutique.

Objectif : L'objectif de cette étude était de déterminer la prévalence de l'OT et d'analyser des facteurs susceptibles de l'influencer chez les patients souffrant de psoriasis.

Collaborateur: Comité scientifique

Auteurs : Halioua B, Zetlaoui J, Pain E, Radoszycki L, Testa D

[POSTER – JDP 2019] Attentes des patients et perception du traitement par biothérapie chez 37 patients souffrant de psoriasis

Présenté aux Journées Dermatologiques de Paris (JDP) (2019)

Les biothérapies (BT) ont révolutionné la prise en charge des patients souffrant de formes modérées à sévères de psoriasis en cas d'échec, d'intolérance ou de contre-indication à deux traitements parmi : PUVAthérapie, acitrétine, méthotrexate et ciclosporine. Malgré des avantages reconnus des BT, il existe encore des réticences face à ces traitements, tant de la part de certains patients que de la part des professionnels de santé. Il existe peu de données en France sur les attentes et la perception du traitement par BT chez les patients souffrant de psoriasis.

Objectif : L'objectif de cette étude était de décrire les perceptions et les expériences des patients atteints de psoriasis en France, en abordant la communication avec les médecins, la satisfaction à l'égard des produits biologiques et les préoccupations concernant les options thérapeutiques.

III. Endocrinology

ACROMEGALY

[ARTICLE – Annals of Endocrinology 2018] [Daily life, needs and expectations of patients with acromegaly in France: An on-line survey](#)

Published in Annals of Endocrinology (2018)

Acromegaly is a chronic acquired disorder characterized by excessive secretion of growth hormone (GH) and increased insulin-like growth factor 1 (IGF-1) level, caused in most cases by a benign pituitary adenoma. Nowadays, its prevalence may vary between 28 to 137 per million people, while its annual incidence ranges between 2 and 11 cases per million inhabitants. To better understand the impact of acromegaly on patients' daily life and evaluate the needs and expectations of patients in terms of services and information, a survey was carried out online in patients or relatives who were registered in a social network of individuals with acromegaly?

Collaborator: IPSEN

Authors: Albarel F, Elaraki F, Delemer B

[POSTER – SFE 2016] [L'acromégalie vue par le patient](#)

Présenté au 33^{ème} Congrès de la Société Française d'Endocrinologie (SFE) (2016)

L'acromégalie est une maladie rare, pour laquelle le parcours de soins, notamment en France, demeure mal compris, avec un délai diagnostique conséquent. L'objectif de cette étude est de comprendre le parcours de soins et les attentes des patients atteints d'acromégalie grâce à un questionnaire en ligne diffusé sur la plateforme Carenity pendant 1 mois et demi. D'après cette étude, les patients acromégales abordent leurs symptômes « d'alerte » en premier lieu avec leur médecin généraliste. Il est donc essentiel de les informer et de les sensibiliser à cette pathologie rare.

[ARTICLE – Diabetes Therapy 2020] [Understanding Reasons for Treatment Discontinuation, Attitudes and Education Needs Among People Who Discontinue Type 2 Diabetes Treatment: Results from an Online Patient Survey in the USA and UK](#)

Published in Diabetes Therapy (2020)

Type 2 diabetes mellitus (T2DM) requires long-term treatment to achieve and maintain glycaemic control; however, up to 50% of people with T2DM discontinue treatment by 1 year. It is therefore important to understand the patient perspective of therapeutic adherence and persistence. For that we use an online questionnaire was presented to people with T2DM in the USA and UK on PatientLive, a platform of Carenity, an online patient community. Those who discontinued at least one T2DM treatment within the last 6 months answered open-ended questions aimed to assess the reasons for discontinuation, how discontinuation could have been prevented, and what would have improved the experience with the discontinued treatment. Thematic qualitative analysis was performed on respondents' answers to these questions.

[POSTER – SFD 2023] [Patients ayant un diabète type 1 : données sur l'organisation et le vécu de la transition de la pédiatrie à la diabétologie d'adultes : Observatoire Transition 1](#)

Présenté au congrès de de la Société Francophone du Diabète (SFD) (2023)

Le diabète est devenu un problème de santé publique important qui touche 60 millions de personnes en Europe, dont 10% sont touchées par le DT1, et la moitié de ces cas surviennent avant l'âge de 20 ans. Actuellement, en France, l'incidence du diabète de type 1 est d'environ 19 cas pour 100 000 enfants de moins de 15 ans. Pour les adolescents et les jeunes adultes, la transition de la pédiatrie à la diabétologie d'adultes constitue une étape importante où il faut maîtriser le risque de rupture de suivi. Il s'agit notamment d'assumer la prise en charge autonome du diabète, de travailler avec les nouveaux professionnels de santé (PDS) de soins adultes et tout en gérant les problématiques psychosociales concomitantes.

Objectifs : Cette étude vise à décrire le processus de la transition de la pédiatrie à la diabétologie d'adultes du point de vue du patient et à mesurer/comprendre le vécu des patients (difficultés personnelles et satisfaction liées à leur expérience pendant la transition).

[POSTER – UEG Week 2021] [Results from a large survey exploring patient preferences for treatment attributes in inflammatory bowel disease across 7 countries in Europe](#)

Presented: United European Gastroenterology (UEG) Week (2021)

Inflammatory bowel disease, comprising Crohn's disease and ulcerative colitis poses a substantial burden on patient and healthcare systems. Understanding patient preferences through shared decision-making optimizes treatment acceptance and adherence. Discrete choice experiments (DCEs) elicit multi-attribute preferences, thereby quantifying the strength of each preference for healthcare interventions.

Objective: The present study aims to explore patients' preferences for treatment attributes of the currently available advanced therapies.

Collaborator: Takeda

Authors: Gionata Fiorino, Nawal Bent-Ennakhil, Pasquale Varriale, Fiona Braegger, Eveline Hoefkens

[POSTER – ECCO 2021] [Survey to identify patient characteristics, treatment preferences and impact of inflammatory bowel disease \(IBD\) on quality of life across 7 countries in Europe](#)

Presented: 16th European Crohn's and Colitis Organisation (ECCO) Virtual Meeting (2021)

Inflammatory bowel disease (IBD), including Crohn's disease (CD) and ulcerative colitis (UC), is characterized by chronic inflammation of the gastrointestinal tract, with no cure currently available. The increasingly complex and diverse treatment paradigm for IBD suggests that along with clinical guidelines, patient engagement through shared decision-making engages patients in treatment decisions and optimizes the chance of a chosen therapy matching their personal preferences. Adequate information and fair presentation of the trade-off between the risks and benefits of treatment are critical for patients' participation in medical decisions.

Objective: This patient survey aimed to describe the demographics and clinical characteristics of respondents and patient-rated preferences towards existing treatment options and impact on

quality of life (QoL); here, we present patient demographics, clinical characteristics, and impact of IBD on QoL.

[POSTER – DSVR 2018] Vécu des patients sous biothérapies et biosimilaires dans la maladie de Crohn – Enquête européenne auprès d’une communauté de patients

Présenté au 10^{ème} colloque de données de santé en vie réelle (DSVR) (2018)

Les biothérapies et leurs versions similaires, les biosimilaires, sont des traitements apportant des solutions thérapeutiques innovantes pour des maladies dépourvues de traitements satisfaisants tels que la maladie de Crohn (MC). L’avènement de ces traitements a bouleversé la prise en charge de ces patients. Si leur efficacité n’est plus à démontrer, leurs effets indésirables potentiels sont souvent redoutés. Peu de données existent sur la perception des patients face à ces traitements. Cette enquête a permis de mesurer la satisfaction des patients MC vis-à-vis de leur biothérapie/biosimilaire, de connaître la perception des patients MC vis-à-vis des biosimilaires et d’identifier les attentes des patients MC en termes d’accompagnement et d’informations.

Auteurs : Pain E, Chekroun M, Gauchoux R

[POSTER – JFHOD 2018] Impact des maladies inflammatoires chroniques de l’intestin et de leurs traitements sur le quotidien des patients – Enquête en vie réelle auprès d’une communauté de patients en ligne

Présenté aux Journées Francophones d’Hépatogastroentérologie & d’Oncologie Digestive (JFHOD) (2018)

Les maladies inflammatoires chroniques de l’intestin (MICI) telles que la maladie de Crohn et la rectocolite hémorragique se caractérisent par une inflammation de la paroi d’une partie du tube digestif. Les deux pathologies se distinguent notamment par le lieu de l’inflammation : la rectocolite hémorragique touche uniquement le rectum et une partie du côlon tandis que la maladie de Crohn peut affecter l’ensemble du tube digestif. Cette enquête menée en vie réelle porte sur une population relativement sévère de patients atteints de MICI. Elle met en exergue l’impact important de la maladie (particulièrement la maladie de Crohn) sur le quotidien des patients (notamment sur la vie professionnelle), ainsi que des problèmes d’errance diagnostique, d’observance et de gestion de la fatigue.

DYSMENORRHOEA

[ARTICLE – Women’s Health 2026] [A real-world study to describe the effectiveness and usage patterns of hyoscine butylbromide plus tablets in patients with dysmenorrhoea](#)

Published in Women’s Health (2026)

Dysmenorrhoea, a common gynaecological issue in women, is characterised by lower abdominal cramps during menstruation impacting quality of life (QoL).

This study evaluates the effectiveness, utilisation and safety of Buscopan® Plus (hyoscine butylbromide (HBB) Plus: 10mg HBB+500mg paracetamol) for self-treating menstrual pain.

This non-interventional, prospective cohort real-world study included women with menstrual pain registered with Carenity, an online patient platform by Else Care SAS.

VI. Infectious

HUMAN IMMUNODEFICIENCY VIRUS (HIV)

[ARTICLE – Patient Preference and Adherence 2022] [Patient Satisfaction with Once-Daily Single-Tablet Darunavir, Cobicistat, Emtricitabine, and Tenofovir Alafenamide \(DRV/c/FTC/TAF\): A RealWorld Study of Patient Self-Reported Outcomes in HIV-1–Diagnosed Adults](#)

Published in Patient Preference and Adherence (2022)

Human immunodeficiency virus (HIV)-1 infection remains a concern. As patient adherence to antiretroviral therapy is essential to avoid drug resistance and virologic failure, greater understanding of patient treatment satisfaction may help facilitate ongoing medication use.

This descriptive study assessed patient satisfaction with DRV/c/FTC/TAF and HIV-related symptoms at baseline and follow-up (4– 6 weeks).

VII. Inflammatory diseases

[ARTICLE – BMC Nutrition 2021] [Immune-mediated inflammatory diseases and nutrition: results from an online survey on patients' practices and perceptions](#)

Published in BMC Nutrition (2021)

The central role of microbiota and the contribution of diet in immune-mediated inflammatory diseases (IMID) are increasingly examined. However, patients' perspectives on nutrition and its impact on their disease has not received a lot of attention. We aimed to directly collect information from patients with IMID about their dietary behaviors and their perceptions of the influence of nutrition on their disease.

[POSTER – ISPOR 2020] [Impact of the COVID-19 Pandemic on Patients with Immune-Mediated Inflammatory Diseases Taking a Biologic Therapy](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2020)

The COVID-19 pandemic has shone a light on the vulnerability of people living with pre-existing immune-mediated inflammatory diseases (IMID) and taking a biologic therapy.

Objective: The present study aims to evaluate the impact of the COVID-19 outbreak on the medical consultations, biologic treatment modifications and access to treatment-specific information of IMID patient taking a biologic therapy.

Collaborator: Dermatology Center, GEM Resopso, University Sorbonne Paris Nord

Authors: Halioua B, Zetlaoui J, Astruc A, Testa D, Bombezin-Domino A, Radoszycki L

[POSTER – DSVR 2020] [Impact de la pandémie de COVID-19 sur les patients atteints de maladies inflammatoires à médiation immunitaire et prenant une biothérapie](#)

Présenté au colloque données de santé en vie réelle (DSVR) (2020)

La pandémie de COVID-19 a mis en lumière la vulnérabilité des patients vivant avec une maladie inflammatoire à médiation immunitaire (IMID) et prenant une biothérapie. Ces patients, particulièrement à risque, ont besoin de contacts réguliers avec leurs professionnels de santé (PDS).

Objectifs : L'objectif de cette étude est d'évaluer l'impact de l'épidémie de COVID-19 sur la prise en charge des patients IMID prenant une biothérapie (modification des modalités de prise de la biothérapie, accompagnement par le corps médical, information reçue en lien avec la maladie et le traitement).

[POSTER – SFR 2019] [Considérations nutritionnelles dans les maladies inflammatoires chroniques : quels impacts sur la prise en charge des patients atteints de rhumatismes inflammatoires chroniques ?](#)

Présenté au 32e congrès de la Société Française de Rhumatologie (SFR) (2019)

Les facteurs environnementaux et génétiques ont un rôle primordial dans les maladies auto-immunes. Parmi les facteurs environnementaux, il a été démontré que la nutrition est considérée comme un facteur clé de la prise en charge et du contrôle des maladies inflammatoires chroniques par les patients. Ce rôle a été suggéré aussi bien dans les maladies inflammatoires de l'intestin (MICI) que dans les maladies liées à un rhumatisme.

Objectifs : L'objectif de cette étude est de décrire et comparer la prise en charge de la nutrition dans trois aires thérapeutiques (rhumatologie, gastro-entérologie et dermatologie) ainsi que de déterminer les attentes des patients en termes d'information et de services en lien avec ce sujet. Le cas des pathologies rhumatologiques a particulièrement été étudié.

Collaborateur : Fresenius Kabi

Auteurs : Pham T, Sokol H, Halioua B, Pourcel G, Brun M, Mary K, Pain E, Testa D

[POSTER – JFN 2019] Considérations nutritionnelles dans les maladies autoimmunes : quels impacts sur la prise en charge des patients ?

Présenté aux Journées Francophones de Nutrition (JFN) (2019)

VIII. Mental health

[POSTER – Psych Congress 2024] [Treating insomnia symptoms as part of major depressive disorder: a cross-sectional survey on patient needs in the US](#)

Presented: Psych Congress (2024)

Major Depressive Disorder (MDD) is a common mental health condition characterized by a prolonged depressed mood, as well as a loss of pleasure or interest in activities. Approximately 280 million people are affected by it worldwide. In the US, it is estimated that 21.0 million adults experienced at least one major depressive episode in their life. It represents 8.3% of all US adults. Around 70% of patients with MDD also suffer from insomnia. When treated for depression, patients' related insomnia is often noted, but neither addressed nor treated. This study aimed to evaluate needs of patients with MDD for adjunctive treatment for insomnia symptoms in the US.

Collaborator: J&J

Authors: Geoffroy P.A, Riise J, Dwibedi N, Sellem L, Zhiheng Z

[POSTER – ENCP 2024] [Treating insomnia symptoms as part of major depressive disorder: a cross-sectional survey on patient needs in EU5 countries](#)

Presented: ENCP (2024)

Major Depressive Disorder (MDD) is a common mental health condition worldwide, with more than 280 million people affected by it. In Europe, it is estimated to affect 6.4% of adults. Around 70% of patients with MDD also suffer from insomnia. When treated for depression, patients' related insomnia is often noted, but treated as a separate treatment. This study aimed to evaluate needs of patients with MDD for adjunctive treatment for insomnia symptoms in the EU5 countries (France, Germany, Italy, Spain, UK).

[POSTER – Encéphale 2021] Observance et iatrogénie: expérience des patients atteints de troubles psychiques

Présenté au congrès de l'Encéphale (2021)

Les troubles psychiatriques occupant une place majeure au sein des Maladies Non Transmissibles (MNT), leur prévention et la diminution de leur progression sont des défis majeurs. Environ 14% de la charge de morbidité mondiale a été attribuée aux troubles psychiatriques, principalement en raison de leur nature chroniquement invalidante. Les traitements pharmacologiques sont une stratégie coût efficace majeure pour aller vers la guérison ou la restauration fonctionnelle des pathologies psychiatriques.

Objectifs : Mieux comprendre le vécu des patients présentant des troubles psychiques, notamment dans le domaine de leurs attitudes et leurs connaissances des risques et bénéfices de leur traitement afin de mieux appréhender leur perception de l'adhésion thérapeutique et du risque iatrogénique.

[POSTER – DSVR 2020] Dépression résistante, impact social et professionnel : la voix des patients

Présenté au colloque données de santé en vie réelle (DSVR) (2020)

La dépression est la maladie psychique la plus répandue au monde. En France, on estime que près d'une personne sur cinq a souffert ou souffrira d'une dépression au cours de sa vie. En première intention, la prise en charge de la dépression implique une psychothérapie et le plus souvent un traitement antidépresseur (AD). Cependant, près d'un patient sur 3 ne répond pas correctement aux traitements AD actuels et est à risque d'évoluer vers une dépression résistante (DR). La DR se définit par l'échec à au moins deux traitements ATD successifs bien conduits (dose, durée, observance). La DR altère la qualité de vie sociale et familiale des patients. A notre connaissance, aucune étude évaluant la qualité de vie via une communauté de patients en ligne, source d'informations récente et originale n'a déjà été mise en place.

Objectif: L'objectif de cette étude était de caractériser l'impact de la dépression résistante au traitement (TRD) sur la qualité de vie des patients, y compris leur vie sociale, familiale et professionnelle.

Collaborateur: Janssen France

Auteurs: Véronique HUBER, Cécile DEAL, Valentin MORISSEAU, Pierre LEGENDRE, Anne SAUVAGET

[POSTER – Congrès Français de Psychiatrie 2016] Que pensent les patients souffrant de trouble de l’humeur ? Enquête auprès d’une communauté de patients (carenity.com)

Présenté au 9^{ème} Congrès Français de Psychiatrie (2016)

Les communautés de patients en ligne offrent une réelle innovation pour : l’accès à l’information, le suivi de la pathologie, les forums de discussions et la recherche médicale. Parmi les patients souffrant de maladies chroniques, ceux atteints de pathologies mentales sont particulièrement victimes de stigmatisation. Le but de cette étude est d’interroger les patients membres de la communauté Carenity.com, souffrant de trouble de l’humeur, sur le vécu de leur maladie, leurs liens avec l’entourage et les associations de patients afin d’améliorer le parcours de soins.

MULTIPLE SCLEROSIS

[ARTICLE – Multiple Sclerosis and Related Disorders 2023] [Cannabis-based products and multiple sclerosis-related pain: The role of routes of administration](#)

Published in Multiple Sclerosis and Related Disorders (2023)

Link et al. recently showed that among a US nationwide sample of people with multiple sclerosis (MS) and chronic pain, cannabis users reported higher levels of pain than non-users (Link et al., 2023). We found similar results in a sample of people with MS living in France and Spain (Barré et al., 2023). Moreover, the authors found that oil/tincture was the most common route of cannabis administration, followed by vaped products. However, while they acknowledged that different routes may be associated with different adverse effects and may be more effective in treating specific symptoms, they did not explore the relationship between route of administration and pain variables. We proposed to do so among our sample of MS patients.

[ARTICLE – Journal of Clinical Nursing 2023] [Symptom severity is a major determinant of cannabis-based products use among people with multiple sclerosis](#)

Published in Journal of Clinical Nursing (2023)

MS is responsible for a wide range of symptoms, including pain. Access to CBP differs according to local legislation. The French context is more restrictive than the Spanish one, and no data regarding cannabis use among MS patients has yet been published. Characterizing MS patients who use CBP constitutes a first step toward identifying persons most likely to benefit from them.

[ARTICLE – Science Direct 2022] [Symptom improvements following therapeutic use of cannabis-based products in French people with multiple sclerosis](#)

Published in Science Direct (2022)

Lowering the effects of multiple sclerosis by using cannabis-based products has been under studies for several years. A recent article explored the extent of medical cannabis use in people with multiple sclerosis (MS) in Canada (Santarossa et al., 2022). However, THC-based substances are still criminalized in several countries such as France. There is therefore, a need to explore the therapeutic use of cannabis-based products (CBP) by people living with MS in this country. Through an online survey, participants completed a self-administered online questionnaire that collected data on socio-demographic characteristics, type of CBP, route of administration, self-reported motives to use CBP, and perceived effectiveness.

Authors: Valentine Ficara, Julie Laurent, Lise Radoszycki

[POSTER – ISPOR Europe 2024] [A real-world longitudinal study characterizing the impact of fatigue in adults with relapsing multiple sclerosis](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2024)

Around 900,000 adults in the United States (US) suffer from multiple sclerosis (MS), one of the most common progressive neurologic disease in young adults. Most MS patients suffer from fatigue, which is one of the main causes of their impacted quality of life. The Fatigue Symptoms and Impacts

Questionnaire – Relapsing Multiple Sclerosis (FSIQ-RMS) is a disease-specific tool designed to assesses its impact on quality of life from a patient perspective.

This study aimed to identify the factors impacting FSIQ-RMS scores over time in RMS patients from the US.

Collaborator: Janssen

Authors: Laury Sellem, Julie Laurent, Lise Radoszycki

[POSTER – ACTRIMS 2022] A Real World Study Characterizing Impact of Fatigue and Patient Symptom Recall in Adults with Relapsing Multiple Sclerosis

Presented: Americas Committee for Treatment and Research in Multiple Sclerosis (ACTRIMS) (2022)

Fatigue is among the most frequent and disabling symptoms in patients with relapsing multiple sclerosis (RMS). Patient reported outcomes (PROs) are fundamental to studying fatigue. Questions remain regarding MS fatigue and their impacts, and determining the best time frame for data collection e.g., daily assessments versus recall of fatigue as experienced over a 1- or 2-week interval.

Objective: The study aims to use the FSIQ-RMS in order to measure MS fatigue symptoms and their impact on daily life in a real-world population and to compare fatigue symptom data collected daily for 7 days versus a 7-day recall.

Collaborator: Janssen Global

Authors: Lauren B. Krupp, Thomas Zwingers, Maria Ait-Tihyaty, Gabriela Kanevsky, Ophélie Wilczynski, Eva Katz, Leigh E. Charvet

[POSTER – EAN 2021] [Measuring the symptoms and impacts of fatigue in adults with relapsing multiple sclerosis using a novel disease specific scale](#)

Presented: European Academy of Neurology (EAN) Congress Virtual Meeting (2021)

Fatigue is among the most frequent and disabling symptoms in patients with relapsing multiple sclerosis (RMS) and a main cause of impaired health-related quality of life. Fatigue is defined by subjective experience and measured via patient reported outcome (PRO) instruments. However, previously available PROs that assess MS-related fatigue do not meet instrument development and psychometric property requirements based on current guidelines. PRO tools that are MS-specific can improve understanding of MS fatigue and its impact, improving its clinical management. Fatigue Symptoms and Impacts Questionnaire - Relapsing Multiple Sclerosis (FSIQ-RMS), a novel MS-specific PRO instrument, was developed to assess both fatigue in patients with RMS and its impacts on physical activity, cognitive and emotional function and coping mechanisms.

Objective: The study was aimed at measuring MS fatigue symptoms and their impact on daily life in a real-world population using a self-administered online questionnaire including the RMS-specific FSIQ-RMS

Collaborators: Janssen Global, NYU Langone Health

Authors: Wilczynski O, Katz E, Charvet L, Krupp L, Schuier M, Lair L

[POSTER – ACTRIMS 2021] [Measuring the symptoms and impacts of fatigue in adults with relapsing multiple sclerosis using a novel disease specific scale: A real-world study in US population](#)

Presented: Americas Committee for Treatment and Research in Multiple Sclerosis (ACTRIMS) (2021)

Multiple Sclerosis (MS) is a chronic autoimmune inflammatory disease of the central nervous system. It affects more than 700,000 people in Europe, and is one of the most common causes of neurological disability in young and middle-aged adults, with females up to three times more frequently impacted than males. While prevalence varies worldwide, it is highest in Europe and North America. The disease is characterized by demyelination and axonal loss leading to neurological impairment and severe disability. Relapsing forms of MS include clinically isolated syndrome, relapsing-remitting MS (which makes up 85 percent of all MS cases), and secondary progressive MS. In addition to the debilitating neurological symptoms of the disease, patients often also suffer from “hidden symptoms,” namely fatigue and depression, both of which are major contributors to reduced quality of life. Fatigue is one of the most common symptoms of MS, occurring in about 80 percent of patients.

Objective: To measure multiple sclerosis (MS) fatigue and its impact on daily life in a real-world population using a survey including the relapsing MS (RMS)-specific Fatigue Symptoms and Impacts Questionnaire-Relapsing Multiple Sclerosis (FSIQ-RMS).

Collaborators: Janssen Global, NYU Langone Health

[POSTER – ACTRIMS andECTRIMS 2020] [A real-world study characterizing symptoms and impacts of fatigue in US adults with relapsing multiple sclerosis using a novel disease specific scale](#)

Presented: Americas Committee for Treatment and Research in Multiple Sclerosis (ACTRIMS) and European Committee for Treatment and Research in Multiple Sclerosis (ECTRIMS) (2020)

Fatigue is among the most frequent and disabling symptoms in patients with relapsing multiple sclerosis (RMS) and is considered to be one of the main causes of impaired quality of life. Considering its subjective nature, fatigue is assessed most accurately via patient reported outcomes (PRO) instruments. However, the available PROs that assess MS-related fatigue have limitations such as not being subtype-specific or assessing only either symptoms or their impacts.

A greater understanding of MS fatigue and associated, MS-specific PRO tools to characterize fatigue and its impact would improve clinicians' decision making and patient care. FSIQ-RMS, a novel MS-specific tool was designed to assess both fatigue symptoms in patients with RMS and their impacts on physical activity, cognitive and emotional function and coping mechanisms.

Objective: The study was aimed at measuring MS fatigue and its impact on daily life in a real-world population using a survey including the RMS-specific FSIQ-RMS.

Collaborators: Janssen Global, NYU Langone Health

Authors: Azoulai M, Lévy-Heidmann T, Morisseau V, Jamieson C, Charvet L, Krupp L, Lair L

[POSTER – DSVR 2020] [Facteurs associés à l'utilisation du cannabis à des fins thérapeutiques et évaluation de ses effets sur les symptômes de la sclérose en plaques en France et en Espagne - Résultats d'une enquête auprès d'une communauté de patients en ligne](#)

Présenté au Colloque données de santé en vie réelle (DSVR) (2020)

Alors qu'en France la possession et la consommation de cannabis est une infraction pénale, la législation espagnole autorise la consommation et la culture privée du cannabis. Même si certains produits pharmaceutiques à base de cannabis ont une autorisation de mise sur le marché dans les deux pays, seuls les patients en Espagne y ont accès. Malgré ces différentes législations, les patients atteints de maladies chroniques utilisent le cannabis sous différentes formes, « naturelle », transformée, autorisée ou non, à des fins thérapeutiques.

Objectifs : Identifier les caractéristiques des patients atteints de sclérose en plaques (SEP) qui utilisent déjà le cannabis pour des objectifs thérapeutiques ; évaluer l'effet du cannabis sur les symptômes de la SEP perçus par les patients ; identifier les facteurs associés à l'utilisation du cannabis, en comparant les résultats entre les deux pays ayant des législations différentes : France et Espagne.

[POSTER –ECTRIMS 2019] [Use and impacts of cannabis for therapeutic purposes in patients with multiple sclerosis in France and Spain: results from an online patient community study](#)

Presented: European Committee for Treatment and Research In Multiple Sclerosis (ECTRIMS) (2019)

In France, the possession and use of cannabis is a penal offence. In Spain, legislation allows the consumption and cultivation of cannabis in private. Some cannabis-based pharmaceutical products, such as Nabiximols, have marketing authorisation in both countries but are only available to patients in Spain.

The objective of this study were (1) to better understand the use of cannabis for therapeutic purposes by patients with multiple sclerosis (MS), (2) to evaluate its impact on MS symptoms and (3) to compare the results in France and Spain, two countries with different legislations.

Authors: Legendre P, Testa D, Chatenet J, Radoszycki L, Verjus

[POSTER – ISPOR Europe 2018] [MS patients’ perception of the effects of PR-fampridine on walking disorders and daily life: results from an observational study conducted via an online community](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2018)

Multiple Sclerosis (MS) is a neurodegenerative disease frequently causing walking impairment. Prolonged-release PR-fampridine (dalfampridine extended-release in US) is approved for the improvement of gait function in MS patients with walking disability (Expanded Disability Status Scale 4-7). Fampridine targets the underlying neurological causes of MS walking impairment through modification of neurotransmission in the CNS and can be used in patients with any subtype of MS. The study aims at observing how patients’ daily life evolved following the prescription of PR-fampridine.

[POSTER – ICIMTH 2018] [Patients’ perception of privacy of personal data, shared in online communities: are we in presence of a paradox?](#)

Presented: International Conference on Informatics, Management and Technology in Healthcare (ICIMTH) (2018)

Virtual online communities help people in coping with complex health issues, such as those present in patients suffering chronic diseases. Further research is required in order to clarify the impact of sharing of personal experiences on the perception of privacy and confidentiality by patients. We studied the case of Carenity an online social network created in France in 2011 bringing together 300,000 patients across Europe, and selected patients suffering Multiple Sclerosis. We conducted an exploratory-descriptive survey, and 253 patients completed an online questionnaire. Most participants did not consider that their privacy was threatened when sharing their personal experiences and data associated with their health condition. As common sense prevents one to share information to strangers to ensure privacy, such paradox may be explained by new strategies to face challenges imposed by chronic conditions disease, where sharing personal experiences may be considered as a complementary source of social support by patients.

[POSTER – ISPOR Europe 2018] [Dramatic improvement in treatment acceptance observed in patients with Multiple Sclerosis switching treatment: a real-world study](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2018)

Most chronic conditions require the patients to take long-term treatments. Lack of adherence and persistence are major barriers to optimal treatment benefit. Patients' behaviour and attitude towards their treatment are hypothesised to result from their complex evaluation of the risk-benefit ratio of their treatment. Measuring patients' acceptance of their medication may help better understand and predict patients' behaviour towards treatment. Patients with Multiple Sclerosis (MS) are prescribed long-term treatments to slow the progression of their chronic disease. Important unmet needs are still voiced by patients. Frequent treatment discontinuation and switching are reported in studies as disease modified therapies in MS patients. In recent years, new MS and Central Nervous System (CNS) treatments have been put on the market with the aim of addressing unmet needs. The objective of this study is to evaluate the impact of treatment change on the level of acceptance of medication in patients with Multiple Sclerosis (MS), in real life.

[POSTER – ECTRIMS 2018] [Multiple sclerosis clinical trials: how to encourage patient participation? Results from a patient study conducted by Carenity.com – A worldwide online patient community.](#)

Presented: European Committee for Treatment and Research in Multiple Sclerosis (ECTRIMS) (2018)

Multiple sclerosis (MS) clinical research is in a worldwide competition. Patient engagement is key to optimize medical research and increase participation rate. Identify levers to improve patients' motivations to join a clinical trial and identify hindrances to their enrolment in order to better communicate and increase participation rate.

Authors: Dos Santos R, Radoszycki L, Chekroun M

[POSTER – ISPOR Europe 2018] [Walking disorders in MS: how do they impact patients’ quality of life? Results from an observational study conducted via an online patient community](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2018)

Multiple Sclerosis (MS) is a neurodegenerative disease, characterized by inflammation leading to demyelination and axonal loss. Symptoms of MS such as spasticity, loss of balance or muscle weakness may progressively lead to irreversible disabilities, greatly impacting patients’ overall quality of life. Nearly half (45%) of patients reported experiencing mobility difficulties within a month of diagnosis and nearly all patients (93%) report difficulties within 10 years. The objectives are to assess the impact of walking disability on MS patients’ quality of life and to identify patients’ expectations regarding walking impairment.

[POSTER – ISPOR 2017] [French patients with MS and their caregivers have to financially support direct non-medical costs linked to their disease](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2017)

The objectives of this study were to assess the out of pocket for MS patients and to measure the impact of MS on the patient quality of life. This survey presents the perception by patients with MS and their relatives of the indirect costs of the disease. The results indicate that, although MS is a long-term condition supported by health insurance, this pathology generates significant indirect costs for patients and their relatives every month. MS also has an impact on the daily lives of patients and caregivers, which involves indirect costs.

PARKINSON'S DISEASE

[ARTICLE – Parkinson's disease 2025] [Patterns of Use and Patient-Reported Effects of Cannabinoids in People With PD: A Nationwide Survey](#)

Published in Parkinson's disease (2025)

People with Parkinson's disease (PD) may use cannabis-based products for symptom management. In France, products containing tetrahydrocannabinol (THC) are prohibited, while cannabidiol (CBD)-products are readily available. However, data on cannabinoid use in French people with PD are lacking. To identify correlates of the use of cannabis-based products and to document their patterns of use and perceived effects.

[ARTICLE – Clinical Parkinsonism & Related Disorders 2024] [Acceptability of and attitudes to the therapeutic use of cannabis and cannabidiol in people with Parkinson's disease: A French survey](#)

Published in Clinical Parkinsonism & Related Disorders (2024)

Cannabis and cannabidiol (CBD) may potentially alleviate symptoms and improve the quality of life of people with Parkinson's disease (PD), although clinical results to date have provided conflicting evidence. In France cannabis use is illegal outside the current restricted medical cannabis experimental framework which does not include PD as an eligible condition. In contrast, CBD products are legal and are easily available. We aimed to evaluate the acceptability of therapeutic cannabis and CBD use, and to assess cannabinoid-related attitudes among people with PD in France, with a view to assessing the potential inclusion of medical cannabinoids in PD treatment options.

SPASTICITY

[ARTICLE – JMIR Public Health and Surveillance 2020] [Perspective of an International Online Patient and Caregiver Community on the Burden of Spasticity and Impact of Botulinum Neurotoxin Therapy: Survey Study](#)

Published in Journal of Medical Internet Research (JMIR) Public Health and Surveillance (2020)

Patient- and caregiver-reported data are lacking on the burden of spasticity, and the impact of botulinum neurotoxin type A (BoNT-A) treatment for this condition, on patients' daily lives. As recommended in recent guidance from the US Food and Drug Administration, online patient communities can represent a platform from which to gather specific information outside of a clinical trial setting on the burden of conditions experienced by patients and caregivers and their views on treatment options in order to inform evidence-based medicine and drug development.

The objective of our study is to characterize spasticity symptoms and their associated burdens on Western European and US patients and caregivers in the realms of work, daily activities, quality of life (QoL), as well as the positive and negative impacts of treatment with BoNT-A (cost, time, QoL) using Carenity, an international online community for people with chronic health conditions.

[ARTICLE – Frontiers in Neurology 2020] [Patient Perspectives on the Therapeutic Profile of Botulinum Neurotoxin Type A in Spasticity](#)

Published in Frontiers in Neurology (2020)

Botulinum toxin-A (BoNT-A) injections are first-line treatment for adult spasticity. Prior patient surveys have reported that BoNT-A treatment improves quality of life but that symptoms usually recur before the next injection. We aimed to explore, in-depth, patient perceptions of the impact of spasticity and the waning of BoNT-A therapeutic effects.

Collaborator: Ipsen

Authors: A. Esquenazi, J. Jorge, P. Varriale, E. Pain, A. Lysandropoulos

[POSTER – TOXINS 2019] [The patients’ perspective on botulinum neurotoxin A treatment: results of a multinational survey for patients with spasticity.](#)

Presented: TOXINS (2019)

Management strategies for adult spasticity include physical and pharmacological therapies, as well as surgery in severe or intractable cases. Botulinum toxin type A (BoNT-A) is a recommended pharmacological option for patients with spasticity, and its anti-spastic effects have been demonstrated in stroke and central nervous system lesions, multiple sclerosis and cerebral palsy. The aim of this study is to understand the burden of BoNT-A treatment from the patient perspective, in terms of impact on activities of daily living and quality of life.

STROKE

[POSTER – ISPOR 2025] Factors Influencing the Quality of Life of Stroke Survivors – Results of an Online Survey in the US

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2025)

Globally, stroke and its sequelae, including hemiparesis and spasticity, are among the leading causes of disability. Stroke survivors are often challenged with long-term disabilities and complications, which often result in a poor health-related QoL. To gather real-world evidence on post-stroke spasticity (PSS) in a real-life treatment setting and identify key factors influencing patient QoL.

BREAST CANCER

[POSTER – Miami Breast Cancer Conference 2026] Real-World Patient and Caregiver Experiences With Breast Cancer Risk of Recurrence in the US: Results of an Online Survey and Social Media Analysis

Presented: 43rd Annual Miami Breast Cancer Conference (2026)

Patients with hormone receptor-positive (HR+)/human epidermal growth factor receptor 2-negative (HER2-) early breast cancer (EBC) remain at risk of early (≤ 5 years) and late (> 5 years) disease recurrences despite standard-of-care adjuvant endocrine therapy. Up to 27% of all patients with BC will recur within 10 years of diagnosis, particularly if initially diagnosed at stage II or III where recurrence rates are 41% and 63%, respectively. Currently, there is little published evidence related to the concerns of patients and caregivers concerning risk of recurrence (ROR). Lack of awareness about ROR has considerable impact on patient and caregiver quality of life, which may result in emotional distress from being unprepared about the true ROR. Here, we present important insights on ROR through the combined results of an online patient survey and subsequent social media analysis (SMA) of patients and caregivers.

COLORECTAL CANCER

[POSTER – ESMO 2023] [P-102 Unmet needs of patients during colorectal cancer care and treatment – a qualitative study through an online patient community](#)

Presented: European Society for Medical Oncology (ESMO) (2023)

Approximately 500,000 people are diagnosed with colorectal cancer (CRC) every year in Europe [1]. Approximately 15 to 30% of these patients are initially diagnosed at a metastatic stage (mCRC), and 20% to 50% of patients with initially localized disease will relapse and present metastasis [2]. The study objective is to better understand the unmet needs of mCRC patients' during their care and treatment pathway, especially for patients with genetic alterations.

LUNG CANCER

[ARTICLE – Oncology and Therapy 2024] [Experience and Care Pathway of Patients with Lung Cancer: An Online International Survey](#)

Published in Oncology and Therapy (2024)

In our global survey, we sought to expand this understanding to people living with LC in countries across different regions, and to bring a more comprehensive understanding of the care pathway experiences in terms of disease management and impact on their daily lives, treatment decision-making, stakeholder involvement, and gaps in information/support services. In light of COVID-19 and the mobilization of patients to engage more online, we also sought to leverage online patient communities as participants for our survey. This enabled access to additional “real-world” patient populations beyond traditional channels such as local recruitment agencies and patient organizations.

[POSTER – ISPOR 2023] [An innovative patient-centric approach to integrate patients' perspectives in the selection of Patient-Reported Outcomes](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2023)

Patient-Reported Outcomes (PROs) are more and more used to support health products and services development and their evaluation by health authorities. Their identification and selection is thus a critical step in medical research to assess the medical conditions from the patients' perspectives during clinical trials and clinical practices. Nevertheless, due to the wide variety of instruments available, identifying the most suitable PROs to use in a specific context might be complex.

There is no consensus on a standardized method to select PROs considering the medical and scientific context and the regulatory recommendations. Patients' perspectives being and more considered in medical product development and in healthcare decision-making, it appears valuable to take into account their preferences during the PRO selection and development process.

This research thus aimed at developing a patient-centric method for PROs selection and applied it in a pilot study on lung cancer.

[POSTER – World Conference on Lung Cancer 2022] [The Lung Cancer Patient Experience and Care Pathway: A Multi-Country Survey](#)

Presented: World Conference on Lung Cancer (2022)

Lung cancer is the second most common malignancy that affects men and women and it is the leading cause of cancer related deaths. Globally in 2020, there were ~2 million new cases of lung cancer and ~1.8 million deaths. Approximately 10-15% of lung cancer cases are classified as small cell lung cancer (SCLC) while the majority of all cases (80-85%) are classified as non-small cell lung cancer (NSCLC). Factors commonly considered (among others) in the determination of NSCLC prognosis include age, performance status, weight loss, and tumor-node-metastasis staging. The 5-year overall survival rate of people living with lung cancer is up to ~90% for those diagnosed with early-stage vs ~63% with localized and ~7% with metastatic disease.

Objective: There is growing evidence that experiences and outcomes of people with lung cancer are impacted not only by treatments, but also by quality of clinical care and supportive resources. For a better understanding of the care pathway differences in people living with cancer and their unmet support needs, we conducted a global survey of people with lung cancer.

MULTIPLE MYELOMA

[ARTICLE – Frontiers in Oncology 2025] [A discrete choice experiment analysis to understand patient preferences for multiple myeloma treatments](#)

Published in Frontiers in Oncology (2025)

Multiple myeloma (MM) is a malignant plasma cell disorder characterized by the clonal expansion of abnormal plasma cells within the bone marrow. The management of relapsed/refractory multiple myeloma (RRMM) represents a significant challenge as the disease relapses or becomes refractory to previous treatments. Recent advances in therapy have expanded RRMM treatment options. This study aimed to gain a deeper understanding of patients' treatment preferences regarding available therapeutic options.

[POSTER – SFFPO 2019] Intégration de la qualité de vie des patients atteints de cancer et traités par immunothérapie dans la pratique clinique

Présenté au 36^{ème} congrès de la Société Française et Francophone de Psycho-Oncologie (SFFPO) (2019)

Préserver la qualité de vie (QdV) des patients atteints de cancer est un objectif majeur des cliniciens et des autorités de santé. En apportant aux patients un gain de survie et un meilleur profil de tolérance par rapport aux standards thérapeutiques, les traitements par Inhibiteurs de Checkpoints Immunologiques (ICI) sont devenus une alternative thérapeutique dans de nombreux types de tumeurs. Alors que la faisabilité de la collecte de données relatives aux symptômes et de données de QdV pour des patients traités par ICI font l'objet de diverses études, il devient essentiel de comprendre les attentes et les positions des patients et des professionnels de santé vis-à-vis de la gestion de la QdV en pratique clinique.

Objectif : L'objectif de l'étude était de décrire les expériences et les attentes des patients traités par ICI relatives à la prise en compte de la QdV dans la prise en charge du cancer.

Collaborateur : Bristol-Myers Squibb (BMS)

Auteurs : Wilczynski O, Boisbouvier A, Radoszycki L, Cotte FE, Gaudin AF, Lemasson H

[POSTER – DSVR 2019] Place de la qualité de vie dans le parcours des patients atteints de cancer et traités par immunothérapie: enquête auprès d'une communauté de patients en ligne

Présenté au 11^{ème} colloque de données de santé en vie réelle (DSVR) (2019)

En apportant aux patients un gain de survie et un meilleur profil de tolérance par rapport aux standards thérapeutiques, les traitements par Inhibiteurs de Checkpoints Immunologiques (ICI) sont devenus une alternative thérapeutique dans de nombreuses localisations tumorales. Il devient essentiel de comprendre la place accordée à la qualité de vie en pratique clinique pour les patients traités par ICI. Les objectifs de l'étude sont de décrire les pratiques actuelles des professionnels de santé concernant la prise en compte de la qualité de vie des patients traités ou ayant été traités par immunothérapie (ICI) tout au long de leur parcours de soins et d'évaluer le niveau de satisfaction des patients.

COLD AGGLUTININ DISEASE (CAD)

[ARTICLE – JMIR Formative Research 2022] [The Burden of Cold Agglutinin Disease on Patients' Daily Life: Web-Based Cross-sectional Survey of 50 American Patients](#)

Published in Journal of Medical Internet Research (JMIR) Formative Research (2022)

Cold agglutinin disease (CAD) is a rare disorder, affecting 15% of patients with autoimmune hemolytic anemia. Few studies have assessed CAD symptoms and their impact on daily life, but these studies did not address the patients' perspectives. The aims of this study were to increase the knowledge about CAD through a patient-centric survey and to gain a better understanding of the burden of this disease. We conducted an internet-based survey in September 2020 among American patients registered on the CAD Unraveled website and members of the Cold Agglutinin Disease Foundation.

Collaborator: Sanofi

Authors: Florence Joly, Lisa Anne Schmitt, Patricia Ann McGee Watson, Emilie Pain, Damien Testa

[POSTER – Rare Patient Advocacy Summit 2021] [Impact of Cold Agglutinin Disease and its related Fatigue on Patients' Daily Life: an Online Survey among 50 US Patients](#)

Presented: Rare Patient Advocacy Summit (2021)

Cold Agglutinin Disease (CAD) is a rare disease and type of autoimmune hemolytic anemia characterized by autoantibodies that bind to red blood cells at below core body temperature. In addition to cold-induced symptoms, the anemia and hemolysis observed in CAD causes numerous symptoms including fatigue, dizziness, shortness of breath, headaches; reported in very few publications. Disease severity may fluctuate. There is no approved drug for the treatment of CAD.

Objective: The present study aims to assess the impact of CAD and its related effects on patients' daily life.

Collaborator: Sanofi Genzyme

Authors: Patricia Ann McGee Watson, Florence Joly, Lisa Anne Schmitt, Emilie Pain, Damien Testa

[POSTER – ISPOR 2021] Impact of Cold Agglutinin Disease and Its Related Fatigue on Patients' Daily Life- An Online Survey Among 50 US Patients

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2021)

Cold agglutinin disease is a rare and poorly understood disorder affecting 15% of patients with autoimmune hemolytic anemia. Few studies have assessed CAD symptoms, and its impact on daily life, but they did not address the patients' perspective. To get real-world evidence of the impact that CAD has on the patient's daily life, Carenity conducted an Internet-based survey in September 2020 among patients registered on the CAD Unraveled website and members from the Cold Agglutinin Disease Foundation.

Objective: To assess the impact of Cold Agglutinin Disease (CAD) and its related effects on patients' daily life.

Collaborator: Sanofi Global, Cold Agglutinin Disease Foundation (CADF)

IMMUNE THROMBOCYTOPENIA (ITP)

[ARTICLE – British Journal of Haematology 2025] [Patient survey in immune thrombocytopenia \(ITP\): Identifying unmet needs related to treatment and disease control in patients living in the United States](#)

Published in British Journal of Haematology (2025)

Immune thrombocytopenia (ITP) is a chronic disease with primary therapeutic goals of platelet count recovery to safe levels to minimize active/future bleeding, alongside easing additional symptoms negatively impacting overall patient well-being with consequent improvement in physical fatigue/energy levels, daily/work-related activities and social/emotional health. Documentation of this rare disease is important for evaluating real-world experiences in treatment satisfaction, expectations and unmet needs in disease management.

This study examined patient experiences and preferences, treatment satisfaction and expectations and unmet patient needs related to disease management and control based on the outcomes of a survey conducted in adults with ITP.

LUPUS

[ARTICLE – Lupus 2021] [Unsupervised clustering analysis of data from an online community to identify lupus patient profiles with regards to treatment preferences](#)

Published in Lupus (2021)

Lupus is a chronic complex autoimmune disease and non-adherence to treatment can deeply affect patient outcomes. The PREFERLUP study used unsupervised clustering analysis to identify profiles of patients with similar treatment preferences in an online community of French lupus patients, using Multiple Correspondence Analysis (MCA) with three unsupervised clustering methods.

Collaborator: Carenity Scientific Committee

Authors: Testa D, Jourde-Chiche N, Mancini J, Varriale P, Radoszycki L, Chiche L

[ARTICLE – Lupus 2015] [Characteristics and information searched for by French patients with systemic lupus erythematosus: A web-community data-driven online survey](#)

Published in Lupus (2015)

The aim of this study is to provide information about the needs of patients with systemic lupus erythematosus (SLE) using Carenity, the first European online platform for patients with chronic diseases. At one year after its creation, all posts from the Carenity SLE community were collected and analysed. A focused cross-sectional online survey was performed. This study shows, for the first time, the feasibility of using data from a community of French patients to obtain insights into the needs and sources of information searched for in the context of a specific disease.

Collaborator: Aix Marseille Université, Assistance Publique – Hôpitaux de Marseille, Hôpital Européen Marseille

[POSTER – EULAR 2020] [Using unsupervised clustering analysis of real life data from an online community to identify lupus patients' profiles regards to their treatment preferences](#)

Presented: European Alliance of Associations for Rheumatology (EULAR) (2020)

Lupus is a prototype of a chronic complex autoimmune disease. Non-adherence rate to treatment is surprisingly high and impairs its management. Adherence to drug treatment is a complicated and multifactorial phenomenon, including characteristics of treatment.

Objective: This study used unsupervised clustering analysis to identify profiles among lupus patients with regards to their treatment preferences (apart from efficiency).

Collaborator: Carenity Scientific Committee

Authors: D. Testa, V. Morisseau, L. Radoszycki, I. Anfray, L. Chiche

[POSTER – ISPOR 2020] Patient treatments preferences: how to identify patient profiles directly from online real-life data? Application to lupus

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2020)

A patient's view on and subsequent compliance may vary depending on the pathology, treatment constraints, and patient profile. Thus, selecting a treatment that best fits a patient's profile and preferences could encourage better compliance.

Objective: To identify patient profiles sharing similar expectations through a Multiple Correspondence Analysis (MCA) associated with unsupervised clustering methods.

Collaborator: Carenity Scientific Committee

Authors: Testa D, Morisseau V, Radoszycki L, Fidyk C, Chiche L

[POSTER – DSVR 2020] La classification non supervisée des données en vie réelle d'une communauté en ligne de patients permet l'identification de profils de patients lupiques concernant leurs préférences thérapeutiques

Présenté au colloque données de santé en vie réelle (DSVR) (2020)

L'adhésion d'un patient à son traitement et l'observance qui en découle peuvent varier selon la pathologie, les contraintes du traitement et le profil du patient. Ainsi, la sélection d'un traitement en adéquation avec le profil et donc les préférences du patient pourrait permettre une meilleure observance.

Objectifs : L'objectif de cette étude est d'identifier des profils de patients lupiques concernant leurs préférences thérapeutiques grâce à une analyse des correspondances multiples (ACM) associée à des méthodes de classification non supervisée.

Collaborateurs : Hôpital Européen de Marseille

Auteurs : Damien Testa, Valentin Morisseau, Lise Radoszycki, Laurent Chiche

[POSTER – DSVR 2019] [Préférences des patients vis-à-vis des traitements : comment identifier des profils de patients à partir de données en vie réelle ? Application au cas du lupus.](#)

Présenté au 11^{ème} colloque de données de santé en vie réelle (DSVR) (2019)

L'adhésion d'un patient à son traitement et l'observance qui en découle peut varier selon la pathologie, les contraintes du traitement et le profil du patient. La mauvaise observance concernerait 50% des patients ce qui représente un problème de santé publique majeur. Les objectifs de cette étude sont de déterminer les attentes des patients atteints de lupus sur la forme galénique idéale et les caractéristiques du traitement, d'identifier des profils de patients partageant des attentes similaires grâce à une Analyse des Correspondances Multiples (ACM) et d'affiner ces profils en utilisant des techniques de classification non supervisée et réaliser une analyse comparative de ces méthodes.

[POSTER – Rencontre Eurobiomed des maladies rares 2013] [Identification des Besoins et Sources d'Information des Patients « Maladies Rares » par Analyse des Données Issues de Communautés de Patients en Ligne en France : l'Étude Lupus-Carenity](#)

Présenté au 3^{ème} Rencontre Eurobiomed des maladies rares (2013)

Le Lupus érythémateux systémique est une maladie auto-immune rare touchant moins de 30 000 personnes en France et il n'existe que peu de données concernant les besoins et les sources d'informations des patients souffrant de cette pathologie. L'étude Lupus-Carenity combine les résultats de deux approches, une analyse de l'ensemble des verbatims de la communauté « Lupus » un an après sa création et une enquête en ligne auprès des membres de cette communauté. Ce travail confirme la faisabilité et l'intérêt de l'analyse des données provenant de communautés de patients en ligne en France dans le cadre des pathologies rares.

CHRONIC OBSTRUCTIVE PULMONARY DISEASE (COPD)

[POSTER – CPLF 2019] [Comprendre les symptômes des patients BPCO et leurs parcours de soins afin d'améliorer la prise en charge](#)

Présenté au Congrès de Pneumologie de Langue Française (CPLF) (2019)

La prévalence de la broncho-pneumopathie chronique obstructive (BPCO) dans la population des 40 ans et plus, non asthmatiques est estimée à 7,5%. Pour les individus atteints, la BPCO est une source majeure de handicap par la dyspnée, la limitation d'activité, les exacerbations, le risque d'insuffisance respiratoire chronique, les manifestations extra respiratoires qu'elle induit. L'évolution de la maladie peut aboutir à une insuffisance respiratoire chronique. Les objectifs de ce travail étaient de mieux connaître les signes avant-coureurs de la BPCO afin d'en accélérer le diagnostic et de mieux comprendre l'évolution des symptômes à la suite du diagnostic afin d'optimiser la prise en charge et le bien-être des patients.

[POSTER – ISPOR, EIP, and ERS 2025] [Describing the burden of RSV infection and subsequent wheezing in toddlers: an international cross-sectional study](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) Europe (2025), Excellence in Pediatrics (EIP) conference (2025), European Respiratory Society (ERS) congress (2025)

Respiratory syncytial virus (RSV) is one of the most common viral respiratory infections globally, with a rising incidence among children under five years of age. This study aimed to describe RSV and subsequent wheezing burden in toddlers infected between the ages of 6 and 24 months and their parents.

Collaborator: Sanofi

Authors: Julie Laurent, Valentine Ficara, and Sahar Haidar

[POSTER – ESPID and EAACI 2024] [Increased risk of wheezing associated with respiratory syncytial virus \(RSV\) in a multi-country cross-sectional survey of parent's perception](#)

Presented: 42nd Annual meeting of the European Society for Paediatric Infectious (ESPID) (2024), European Academy of Allergy & Clinical Immunology (EAACI) congress (2024)

RSV is a common and contagious seasonal virus. By two years of age, >90% of children will have had at least one RSV infection. Among infants under one year old, RSV is a leading cause of hospitalization for acute lower respiratory tract diseases such as bronchiolitis and pneumonia. Some studies suggest RSV bronchiolitis may be associated with an increased risk of subsequent wheezing in infants and children. With the upcoming arrival of new immunization solutions, it is important to document the full burden of RSV including its short/medium term complications.

RHEUMATOID ARTHRITIS

[ARTICLE – Joint Bone Spine 2021] [Physical activity and quality of life of patients with rheumatoid arthritis at the time of COVID-19 lockdown: results from Carenity, an online patient community](#)

Published in Joint Bone Spine (2021)

It has been well established that physical activity (PA) has a positive impact on patients affected by rheumatoid arthritis (RA) [1]. However, the prolonged lockdown triggered by COVID-19 from March to May 2020 has dramatically decreased opportunities for PA in France. This study aimed to describe and measure the impact of this lockdown on PA practice, quality of life, and relationships with rheumatologists of patients affected by RA.

[ARTICLE – Joint Bone Spine 2021] [Physical activity and rheumatoid arthritis: Need for practical, precise, and personalized support-Results from an online survey](#)

Published in Joint Bone Spine (2021)

Patients with rheumatoid arthritis (RA) frequently experience chronic joint pain, swelling, stiffness and fatigue. These symptoms may significantly impair patient daily physical activity (PA). Indeed, RA patients practice less exercise and exert lower levels of PA than their healthy counterparts. Health-enhancing PA together with specific exercises decreases the overall risk of morbidity and premature mortality in RA patients. The objective of this study was to describe the practice of PA in RA patients, in particular their perception of rheumatologist recommendations to engage in PA.

[ARTICLE – JMIR Formative Research 2022] [Patients’ Perspectives About the Treatment They Receive for Cardiovascular Diseases and Mental Disorders: Web-Based Survey Study](#)

Published in Journal of Medical Internet Research (JMIR) Formative Research (2022)

Noncommunicable disease (NCD)–related deaths account for 71% of deaths worldwide. The World Health Organization recently developed a global action plan to address the impact of NCDs, with the goal of reducing the number of premature NCD-related deaths to 25% by the year 2025. Appropriate therapeutic adherence is critical for effective disease management; however, approximately 30%-50% of patients with an NCD do not comply with disease management activities as prescribed. This study aims to better understand patients’ perspectives regarding therapeutic adherence and iatrogenic risk in 2 major groups of NCDs for which poor disease management can have fatal consequences: cardiovascular diseases and mental disorders.

[ARTICLE – Issues in Health Economics 2021] [Psychological distress during the first COVID-19 lockdown: vulnerability factors specific to people living with a chronic illness or disability](#)

Published in Issues in Health Economics n°255 (2021)

The impact of the crisis and of the first COVID-19 lockdown in France on mental health has been substantiated by surveys in the general population, which have highlighted the excessive risk of psychological distress among people living with a chronic illness or disability. However, the data from these surveys does not allow the situation of these specific populations to be studied precisely, due to their small number of respondents. To make up for this lack of information and to better understand the mechanisms involved, the choice was made to use an online survey distributed by a social network and by associations for people living with chronic illness or disability.

[ARTICLE – PhUSE 2018] [Adverse Drug Reactions detection on social media: bias and limitation](#)

Presented: PhUSE – The clinical data science conference (2018)

Social media are computer-mediated technologies that facilitate the creation & sharing of information and are an important source for Adverse Drug Reaction (ADR) collection. This can help to reduce under-reporting in postmarketing phase products or monitor drug-specific trends.

In the paper “Patient-generated Health Data (Social Media) is a Potential Source for ADR Reporting” we concluded that the application of social media is subject to challenges because the data are inconsistent, unstructured and region-specific. In an attempt to solve these challenges, the current paper will focus on the following topics: - Increasing the number of sources and languages; Diversifying and comparing data sources (general social media vs specialized media such as the online patient community Carenity®). This analysis will provide a better understanding of the collected data, allowing us to estimate biases when working with social media, and will lead to a new field of application: the pharmaco-epidemiology.

[ARTICLE – Health Technology and Informatics 2017] [The Meaning of Patient Empowerment in the Digital Age: The Role of Online Patient-Communities](#)

Published in Studies in Health Technology and Informatics (2017)

Traditionally, patient empowerment has been used as a strategy for health promotion. The rise of online communities of patients represents a good example of how patient empowerment occurs, independently of the intervention of existing healthcare providers and insurers, allowing thus a more accurate definition of meaning of this concept. We describe two situations related with the development of health-related social networks: (1) The emergence of a new biomedical research model in which patients lead research, shifting the equilibrium of power from the professionals to research subjects themselves, and (2) The emergence of Lay Crowd-Sourced Expertise in these communities, arising from the daily exchange among patients affected by chronic conditions and their relatives, giving place to a new era of bottom-up data generation, previously unknown in biomedical sciences. We enrich these descriptions by analyzing interviews to key actors of these “on line” communities.

[ARTICLE – BMJ Innovations 2017] [Defining patient centricity with patients for patients and caregivers: a collaborative endeavour](#)

Published in BMJ Innovations (2017)

Patient engagement is an essential aspect in the research/development of biopharmaceutical products and disease management. Patient centricity should be defined as ‘Putting the patient first in an open and sustained engagement of the patient to respectfully and compassionately achieve the best experience and outcome for that person and their family’. Important principles for patients focused on education/information, cocreation, access and transparency. The development of a consistent definition of patient centricity and its associated principles provides an opportunity for biopharmaceutical companies to adopt and use these as a reference point for consistent patient engagement throughout the product life cycle.

[ARTICLE – Elsevier Masson 2017] [Advantages and limitations of online communities of patients for research on health products](#)

Published by Elsevier Masson (2017)

The way patients and their caregivers share information on various online platforms about health topics and their own experiential knowledge presents new potential environments for research, particularly as concerns health products. How patients freely express their experiences and feelings and the reality of what they share also opens the way for societal research into health products, a field that is still under-explored.

The round table on this topic endeavoured to: explore these issues and develop a better understanding of the phenomenon and the different varieties of online communities and networks for patients; identify possible advantages, special features, and methodological, regulatory, and ethical limitations that researchers currently face; and finally, to put forward the first recommendations in this growing field of research.

Authors: Ravoire S, Lang M, Perrin E, the participants of Giens XXXII Round Table No. 6, Audry A, Bilbault P, Chekroun M, Demerville L, Escudier T, Guérault-Accolas L, Guillot C, Malbezin M, Maugendre P, Micallef J, Molimard M, Montastruc F, Pierron E, Reichardt L, Thiessard F

[POSTER – ISPOR 2023] [Patient-Driven Outcome Selection \(PDOS\): a patient-focused approach for selecting outcomes using patient-generated data](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2023)

Patient-Reported Outcomes (PROs) are increasingly used to support the development and the evaluation of health products and services. Due to the wide variety of instruments available, identifying the most suitable Patient-Reported Outcome Measures (PROMs) to use in a specific context might be complex. There is no consensus on a standardized method to choose PROs considering the scientific context and the regulatory recommendations. This research aimed at developing a patient-centric, structured, replicable and generalizable method for PROs selection and development using patient-generated data.

[POSTER – ISPOR 2021] Post-lockdown impact of the COVID-19 pandemic on patients affected by chronic diseases in Europe

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2021)

Patients with Chronic Medical Conditions (CMC) require regular access to healthcare professionals and have to take long-term treatments. The COVID-19 pandemic may affect their clinical outcomes.

Objective: Evaluate the impact of the COVID-19 epidemic on patients with CMC in Europe.

Collaborator: Scientific committee

Authors: Alexis Astruc, Bruno Halioua, Jean Zetlaoui, Meryem Harrizi, Alexis Bombezin--Domino, Lise Radoszycki

[POSTER – ISPOR 2021] Post-Lockdown Impact of the COVID-19 Pandemic on Patients Affected By Chronic Diseases in the United States

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2021)

Patients with Chronic Medical Conditions (CMC) require regular access to healthcare professionals and have to take long-term treatments. The COVID-19 pandemic may affect their clinical outcomes

Objective: The present study aims to assess the first post-lockdown impact of the COVID-19 outbreak on CMC patients living in the United States.

Collaborators: GEM Resopso, Université Sorbonne Paris Nord

Authors: Halioua B, Zetlaoui J, Astruc A, Harrizi M, Bombezin--Domino A, Radoszycki L

[POSTER – CNGE 2021] Étude en vie réelle de l'impact de l'épidémie de COVID 19 sur les patients atteints de maladies chroniques

Présenté : Collège national des généralistes enseignants (CNGE) (2021)

La pandémie de coronavirus (COVID 19) est l'une des plus grandes crises sanitaires mondiales depuis près d'un siècle. Celle-ci a eu des conséquences majeures sur l'état de santé des patients, plus à risque de développer des formes graves ou de décéder du COVID 19 que la population générale.

Objectifs : Évaluer l'impact de l'épidémie de COVID 19 sur les patients chroniques à l'aide d'une communauté de patients en ligne.

Collaborateur : Université Sorbonne Paris Nord

Auteurs : Alexis Astruc, Bruno Halioua, Jean Zetlaoui, Ophélie Wilczynski, Tiphaine Lévy Heidmann, Lise Radoszycki

[POSTER – JNI 2021] Impact post déconfinement de la pandémie de COVID 19 sur les patients chroniques en Europe

Présenté : Présenté aux Journées Nationales d'Infectiologie (JNI) (2021)

L'ampleur de la pandémie de COVID 19 et l'isolement qui en a résulté pourraient avoir des conséquences majeures sur l'état de santé des patients atteints de maladies chroniques. Ces patients particulièrement à risque ont besoin de contacts réguliers avec les professionnels de santé et doivent prendre des traitements au long cours. La pandémie peut perturber leurs soins.

Objectifs : Cette étude vise à évaluer l'impact de la pandémie de COVID 19 sur les patients atteints de maladie chronique vivant en Europe, à la fin du 1er confinement.

Collaborator: Comité scientifique

Auteurs : Astruc A, Halioua B, Zetlaoui J, Harrizi M, Bombezin Domino A, Radoszycki L

[POSTER – DSVR 2021] [Impact post déconfinement de la pandémie de COVID 19 sur les patients chroniques en France](#)

Présenté au colloque données de santé en vie réelle (DSVR) (2021)

L'ampleur de la pandémie de COVID 19 et l'isolement qui en a résulté pourraient avoir des conséquences majeures sur l'état de santé des patients atteints de maladies chroniques. Ces patients particulièrement à risque ont besoin de contacts réguliers avec les professionnels de santé et doivent prendre des traitements au long cours. La pandémie peut perturber leurs soins.

Objectifs : Cette étude vise à évaluer l'impact de la pandémie de COVID 19 sur les patients atteints de maladie chronique vivant en France, à la fin du 1^{er} confinement.

[POSTER – DSVR 2021] [La prise en compte des données de vie réelle dans l'évaluation des technologies de santé : analyse des études post inscription en France](#)

Présenté au colloque données de santé en vie réelle (DSVR) (2021)

Les données de vie réelle sont de plus en plus reconnues comme une source d'information essentielle et complémentaire aux études cliniques et ont fait l'objet d'une attention croissante dans l'évaluation des technologies de la santé (ETS) au cours des dernières années.

Objectifs : Décrire le rôle des études post inscription dans le processus d'ETS et décrire l'évolution des études post-inscription en France.

Auteurs : Wilczynski O, Radoszycki L, Avril C

[POSTER – ISPOR 2020] Patients knowledge on microbiota and acceptability of fecal microbiota transplantation in various chronic diseases

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2020)

Gut microbiota is now considered a key player in human health. Despite increasing media exposure, patients' knowledge on microbiota has never been assessed.

Objective: We evaluated, in various chronic diseases, patient knowledge of microbiota and the acceptability of fecal microbiota transplantation (FMT) via an online patient community using an established approach.

Collaborator: Scientific committee

Authors: N. Benech, L. Radoszycki, C. Fidyk, P. Varriale, H. Sokol

[POSTER – CMGF 2020] Étude en vie réelle de l'impact de l'épidémie de COVID 19 sur les patients atteints de maladies chroniques

Présenté au : Congrès Médecine Générale France (CMGF) (2020)

La pandémie de coronavirus (COVID 19) est l'une des plus grandes crises sanitaires mondiales depuis près d'un siècle. Celle-ci a eu des conséquences majeures sur l'état de santé des patients, plus à risque de développer des formes graves ou de décéder du COVID 19 que la population générale.

Objectifs : Évaluer l'impact de l'épidémie de COVID 19 sur les patients chroniques à l'aide d'une communauté de patients en ligne.

[POSTER – DSVR 2020] Étude en vie réelle de l’impact de l’épidémie de COVID-19, durant le confinement en France, sur les patients atteints de maladies chroniques

Présenté au colloque données de santé en vie réelle (DSVR) (2020)

La propagation de la pandémie de COVID-19 pourrait avoir des conséquences majeures sur l’état de santé des patients atteints de maladies chroniques. Ces patients sont particulièrement à risque, ils ont besoin de contacts réguliers avec les professionnels de santé et doivent prendre des traitements au long cours.

Objectifs : L’objectif de cette étude est d’évaluer l’impact de l’épidémie de COVID-19 sur les patients chroniques à l’aide d’une communauté de patients en ligne.

[POSTER – ISPOR 2020] The Role of Real World Evidence in Health Technology Assessment over Time: A Research on the French Situation

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2020)

Real-World Evidence (RWE) is more and more recognized as a valuable source of evidence and has been a growing focus of Health Technology Assessment (HTA) in the past few years. The HTA body in France is called the Haute Autorité de Santé (HAS) (National Authority for Health) and commissions the Transparency Committee to evaluate post-registration studies.

Objective: The ongoing research aims at describing the current role of post-registration studies in the HTA process and the evaluation of those studies in France.

Authors: Radoszycki L, Wilczynski O, Avril C

[POSTER – ISPOR 2020] [Impact of the COVID-19 Pandemic on Patients Affected By Chronic Diseases in Europe](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2020)

Patients with chronic medical conditions (CMC) require regular access to healthcare professionals and have to take long-term treatments. The coronavirus (COVID-19) may affect their clinical outcomes.

Objective: The present study aims to assess the impact of the COVID-19 outbreak on adult patients with CMC living in Europe.

Collaborator: Dermatology Center, GEM Resopso, University Sorbonne Paris Nord

Authors: Halioua B, Zetlaoui J, Astruc A, Lévy-Heidmann T, Testa D, Bombezine-Domino A, Radoszycki L

[POSTER – JFN 2019] [Considérations nutritionnelles dans les maladies autoimmunes : quels impacts sur la prise en charge des patients ?](#)

Présenté aux Journées Francophones de Nutrition (JFN) (2019)

Les facteurs environnementaux et génétiques ont un rôle primordial dans les maladies auto-immunes. Parmi les facteurs environnementaux, il a été démontré que la nutrition est un facteur clé de la prise en charge et du contrôle des maladies inflammatoires chroniques. Ce rôle a été démontré aussi bien dans les maladies inflammatoires de l'intestin (MICI) que dans les maladies liées à un rhumatisme.

Objectif : L'objectif de cette étude est de décrire et comparer la prise en charge de la nutrition dans trois aires thérapeutiques (rhumatologie, gastro-entérologie et dermatologie) ainsi que de déterminer les attentes des patients en termes d'information et de services en lien avec ce sujet.

[POSTER – ISPOR 2018] [How can Acceptance Measurement Help Understanding Patients' Concerns and Working on Solutions? \(Crohn's Disease, COPD, Osteoarthritis\)](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2018)

Patients with chronic disease are generally required to take long-term treatments to treat their illness and avoid complications. However lack of adherence is very common and represents major barriers to treatment efficiency. The objectives of this study are to evaluate the level of acceptance to medication in chronic diseases patients (Crohn's disease, chronic obstructive pulmonary disease, Osteoarthritis) in real life; to identify issues and to define priorities for action. Treatment acceptance is not satisfactory in chronic disease patients. General acceptance is mainly driven by patients' perceived treatment effectiveness, side effects and long term use while socio-demographical and clinical characteristics have a minor contribution. These findings indicate patients' priorities and unmet needs; however, they must be confirmed using longitudinal data.

[POSTER – ISPOR 2017] [Accurate representation of patients’ opinions for decision making: are online health communities good candidates?](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2017)

The development of online patient communities worldwide has prompted questions about their ability to collect reliable information for a deeper understanding of patients’ health experiences and unmet needs. The goal of this research is to analyse the key socio-economic characteristics of patient communities’ users, examine their correspondence with national patients’ demographics and provide guidance on whether or not weighting schemes should be considered for patients’ communities’ samples of users. Health communities provide a new service for a swift collection and analysis of patient-reported outcomes in a real-world setting.

[POSTER – ISPOR 2016] [Patients’ acceptance and adherence of their medication: results from a European multi-disease study with online patient community](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2016)

This study aimed at evaluating the level of acceptance and adherence for various chronic diseases in real life using Carenity, a patient online community in five languages. Measuring patients’ acceptance of their medication can help better understand and predict patients’ behaviour towards treatment. All patients connecting to the Carenity platform were invited to complete an online questionnaire including: questions on demographics, chronic disease and medication, the ACCEPT® questionnaire and the MMAS-8® Questionnaire. Acceptance and adherence are two different but related constructs. While adherence assesses behaviour toward treatment, acceptance explains and partially predicts behaviour. This relationship is complex and varies across diseases.

[POSTER – ISPOR 2014] [Patients’ acceptance of their medication: Results from a French multi-diseases study with patient online community using the ACCEptance by the Patients of their Treatment \(ACCEPT©\) questionnaire](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2014)

According to the World Health Organization, about 50% of patients with chronic diseases do not strictly follow their prescriptions of long-term treatments in developed countries. These lacks of adherence and persistence can be major barriers to treatment efficiency in real world, for many chronic diseases. The generic ACCEptance by the Patients of their Treatment (ACCEPT) questionnaire was developed to measure patients’ acceptance of their medication. The objective of this study was to evaluate for a variety of chronic diseases the level of patients’ acceptance of their medication in real life using Carenity, a patient online community.

[POSTER – ISPOR 2013] [Patient network as a data-source for pro research. Carenity experience](#)

Presented: International Society for Pharmacoeconomics and Outcomes Research (ISPOR) (2013)

To explore the potential of online patient networks (PN) as a viable source of PRO data for clinical research. Several PNs have emerged in the last few years in different European countries, and as a natural meeting point for chronic patients they represent a promising source of patient reported data. In this poster, the experience with the French PN “carenity.com” is described. Results show differences in the expected direction, backing the validity of the data collected from this source.
